

Natural Language Processing with Python & nltk Cheat Sheet by RJ Murray (murenei) via cheatography.com/58736/cs/15485/

| Handling Text | |
|-------------------|----------------------------------|
| text='Some words' | assign string |
| list(text) | Split text into character tokens |
| set(text) | Unique tokens |
| len(text) | Number of characters |

| Accessing corpora and lexical resources | |
|---|--|
| from nltk.c orpus import brow n | import CorpusReader object |
| <pre>brown.w or ds(tex t_id)</pre> | Returns pretokenised document as list of words |
| <pre>brown.f il eids()</pre> | Lists docs in Brown corpus |
| brown.c at ego ries() | Lists categories in Brown corpus |

| lokenization | |
|--|----------------------------------|
| text.s pli t(" ") | Split by space |
| <pre>nltk.w ord _to ken ize r(text)</pre> | nltk in-built word tokenizer |
| <pre>nltk.s ent _to ken ize (d oc)</pre> | nltk in-built sentence tokenizer |

| Lemmatization & Stemming | |
|--|--|
| <pre>input= "List listed lists listing listin g s"</pre> | Different suffixes |
| <pre>words= inp ut.l ow er().s plit(' ')</pre> | Normalize (lower- case) words |
| porter =nl tk.P or ter Stemmer | Initialise Stemmer |
| [porte r.s tem(t) for t in words] | Create list of stems |
| WNL=nl tk.W or dNe tLe mma tizer() | Initialise WordNet Iemmatizer |
| [WNL.1 emm ati ze(t) for t in words] | Use the lemmatizer |

| Part of Speech (POS) Tagging | | |
|---|---|--|
| <pre>nltk.h elp.up enn _ta gse t('MD')</pre> | Lookup definition for a POS tag | |
| <pre>nltk.p os_ tag (words)</pre> | nltk in-built POS tagger | |
| | <use alternative="" ambiguity="" an="" illustrate="" tagger="" to=""></use> | |

| Sentence Parsing | |
|--|------------------------------------|
| g=nltk.da ta.l oa d(' gra mma r.cfg') | Load a grammar from a file |
| g=nltk.CF G.f rom str ing ("""""") | Manually define grammar |
| <pre>parser =nl tk.C ha rtP ars er(g)</pre> | Create a parser out of the grammar |
| trees= par ser.pa rse _al l(text) | |
| for tree in trees: print tree | |
| from nltk.c orpus import treebank | |
| <pre>treeba nk.p ar sed _se nts ('w sj_ 00 0 1.mrg')</pre> | Treebank parsed sentences |

| Text Classification | |
|---|---------|
| <pre>from sklear n.f eat ure _ex tra cti on.text imp ect orizer</pre> | port Co |
| <pre>vect=C oun tVe cto riz er().f it(X_t rain)</pre> | Fit baç |
| <pre>vect.g et_ fea tur e_n ames()</pre> | Get fe |
| vect.t ran sfo rm(X_t rain) | Conve |
